

EU Transport GHG: Routes to 2050

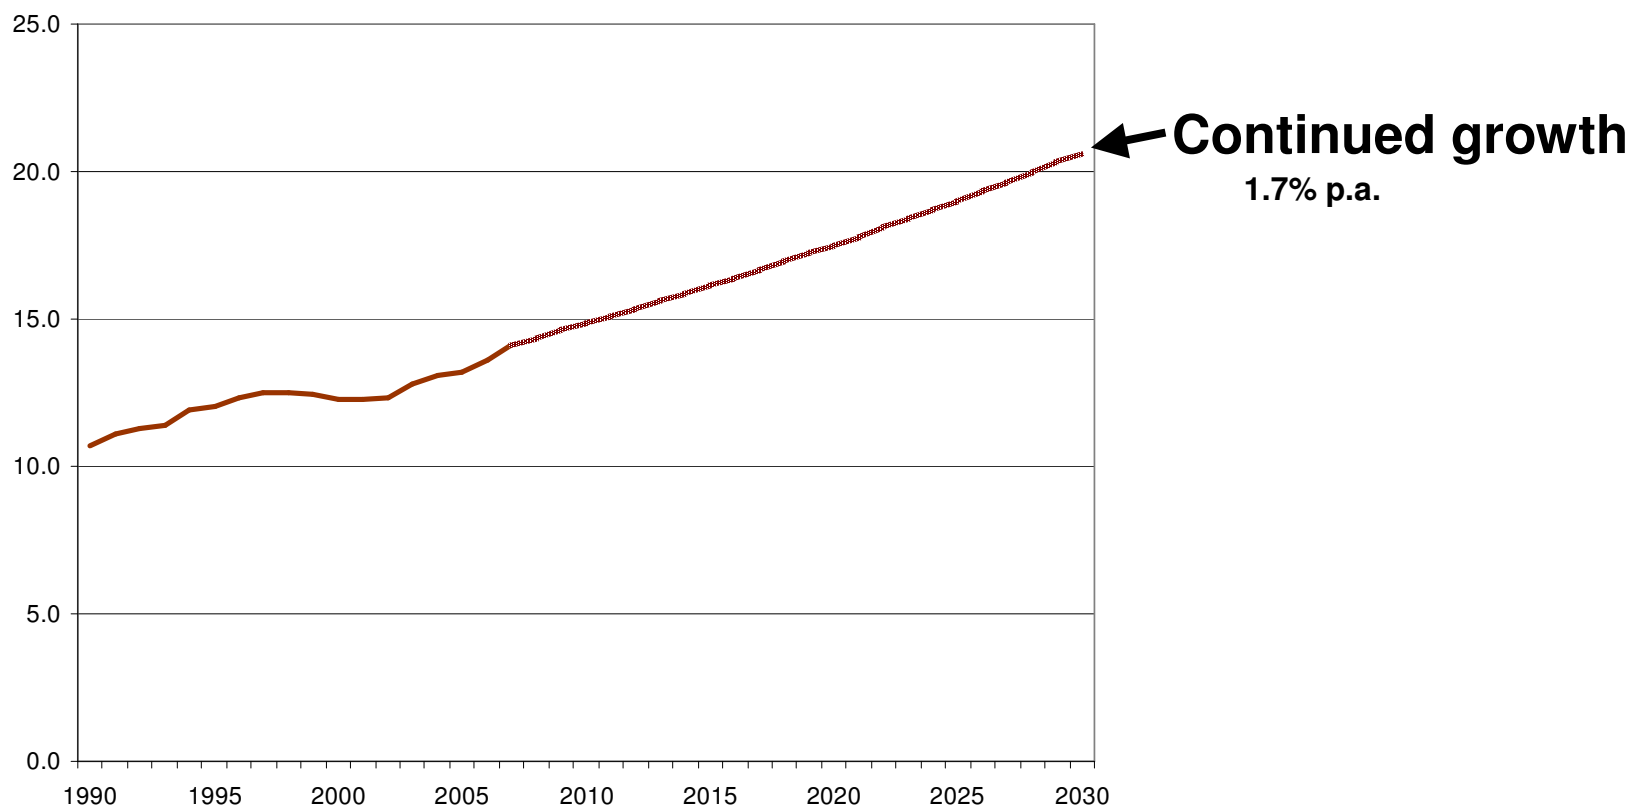

Dr. Peder Jensen
Head of Energy and Transport Group
Air and Climate Change Programme

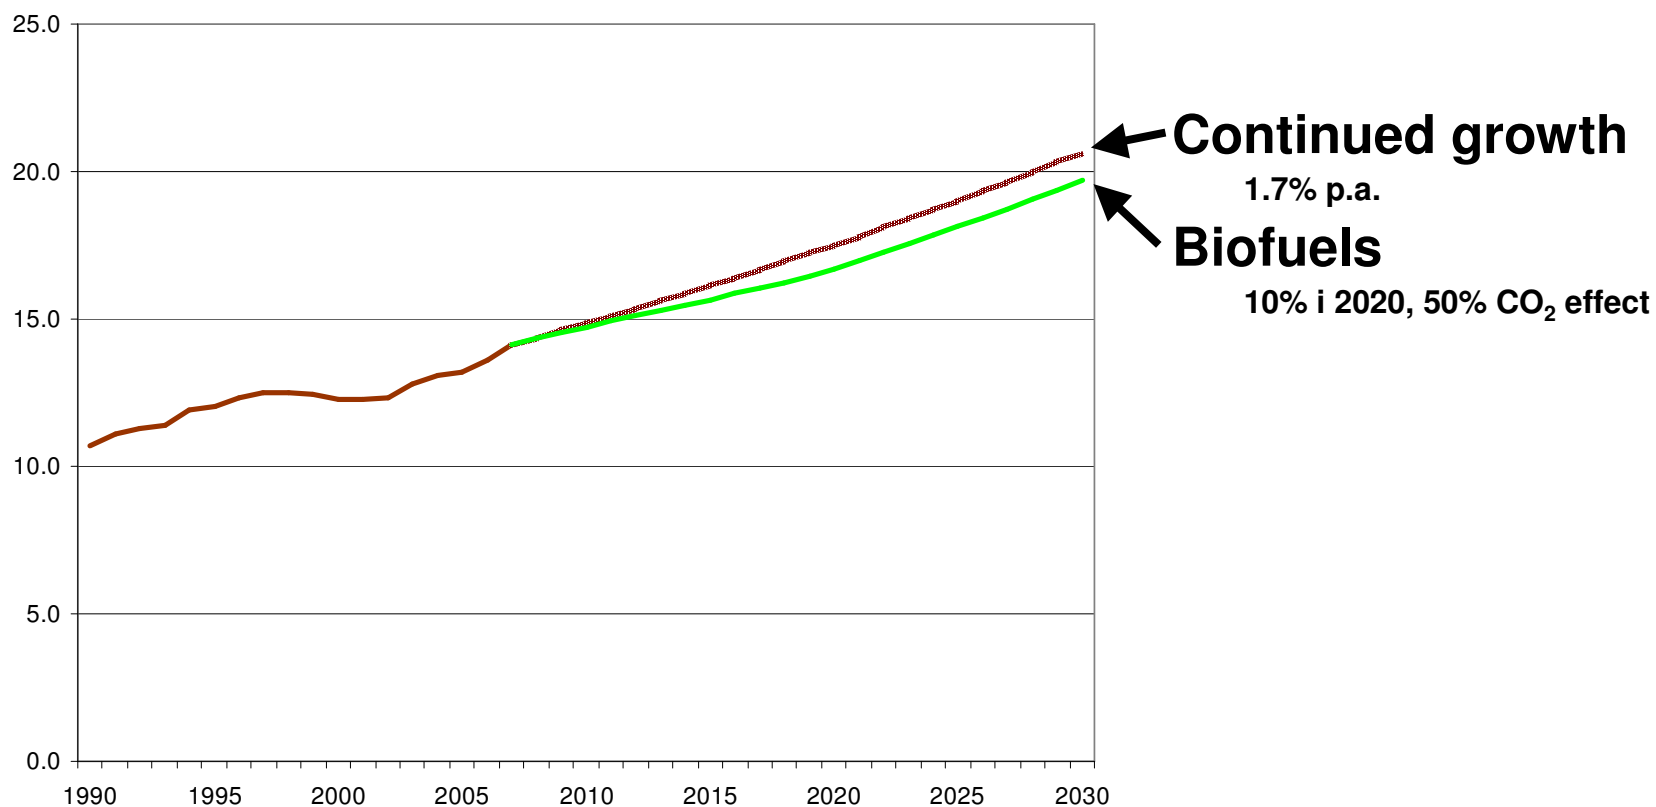

CO₂ from Danish transport

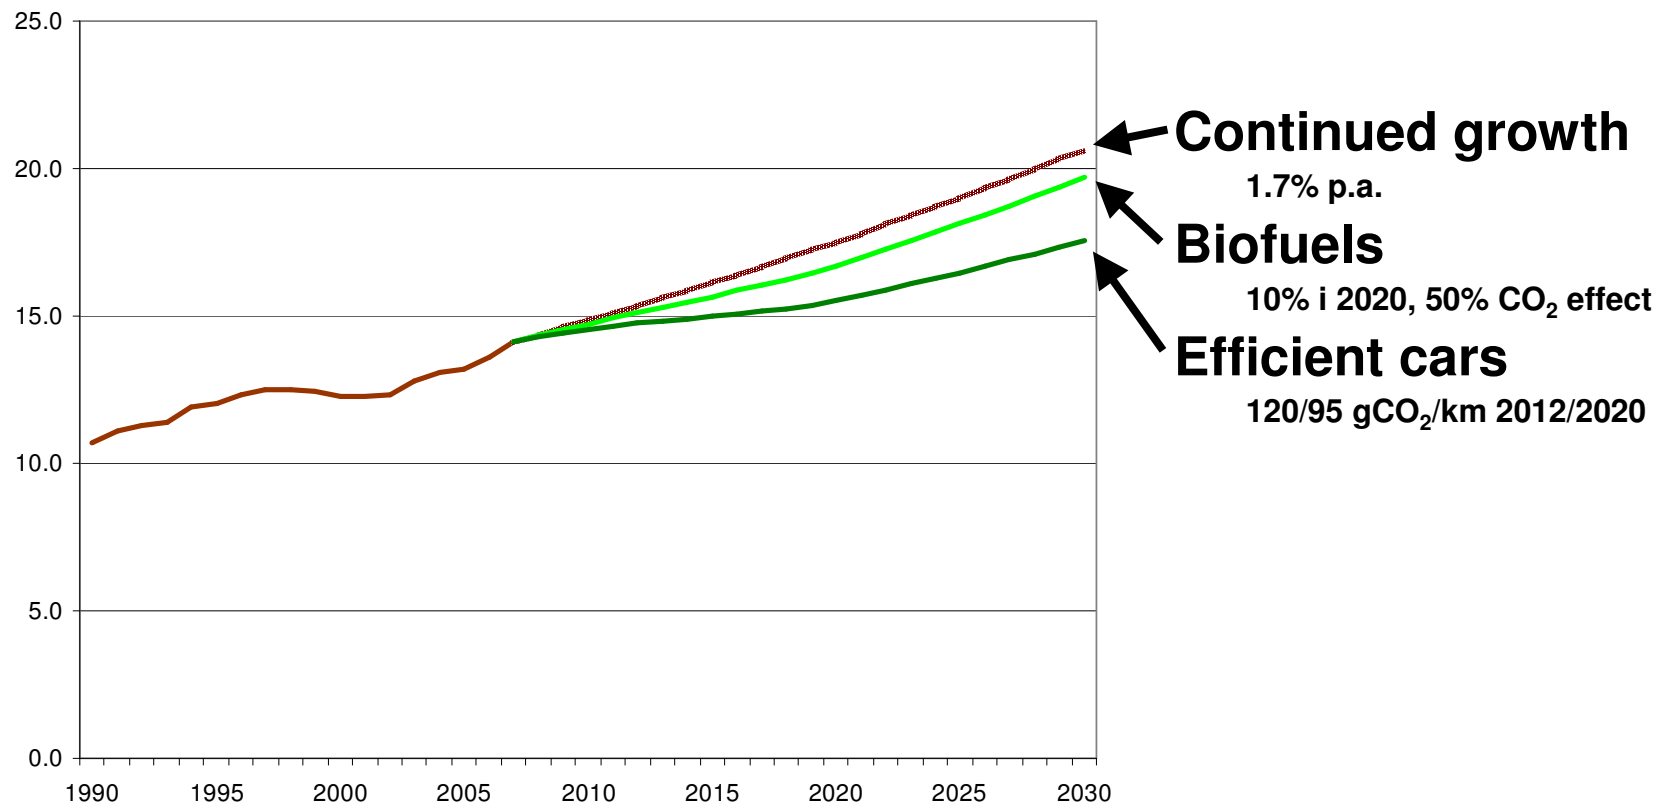

What technology can do

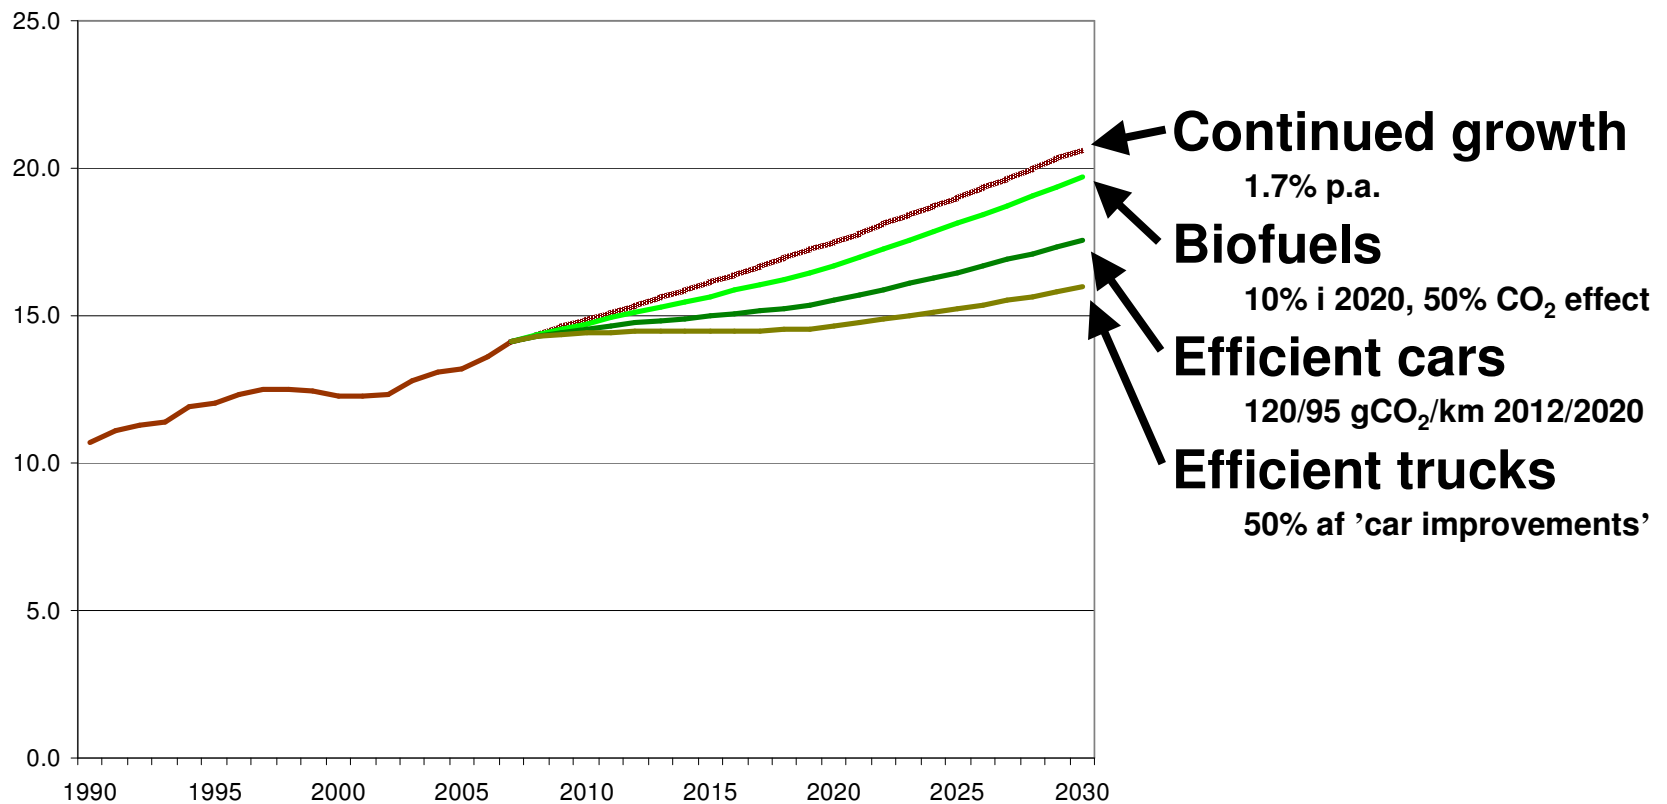

CO₂ from Danish transport

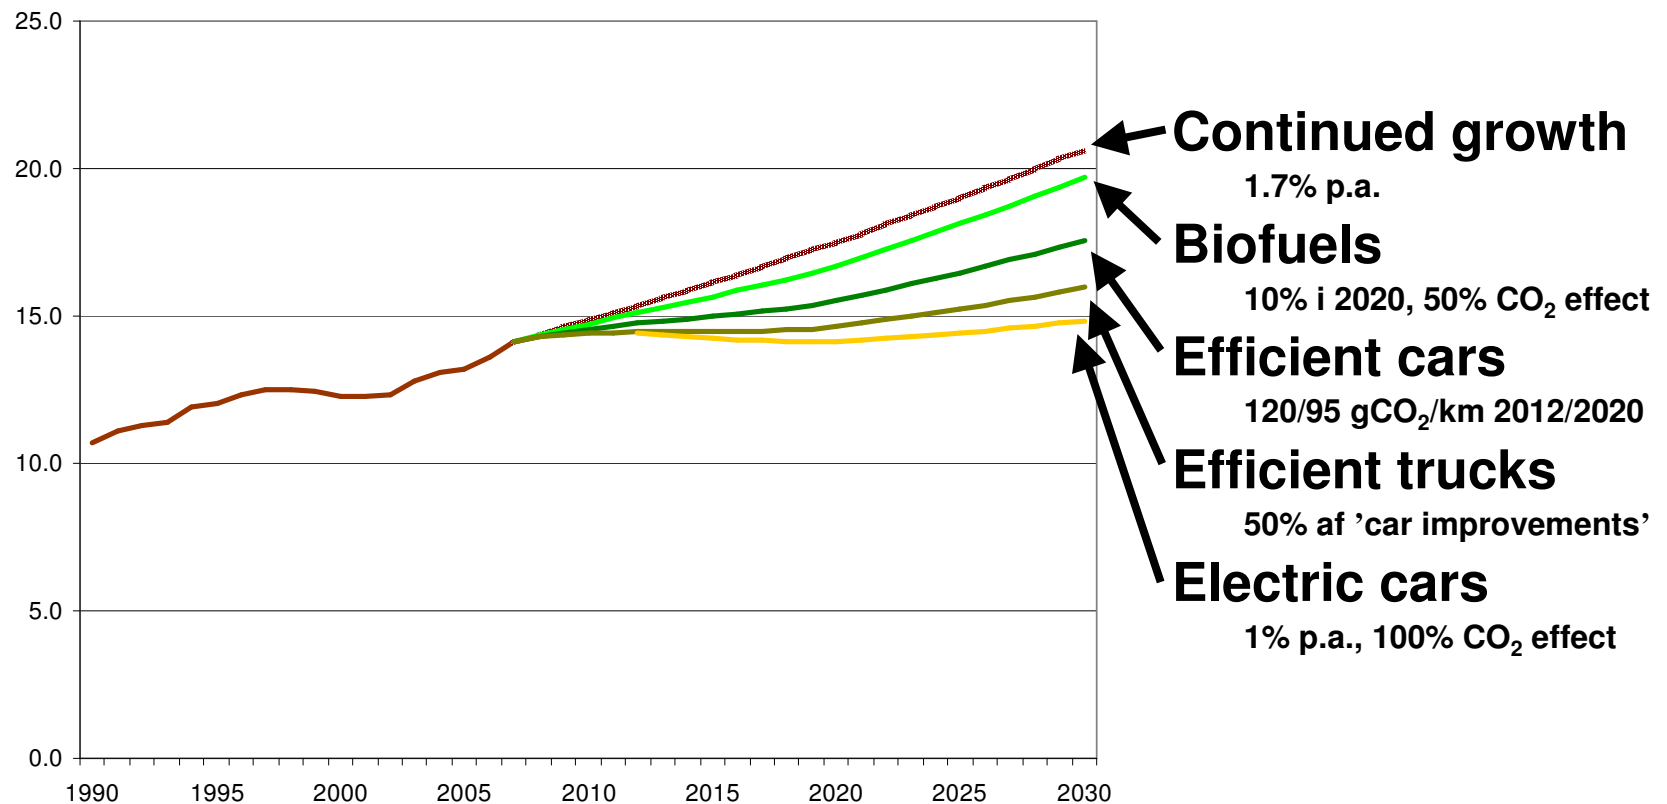

CO₂ from Danish transport

CO₂ from Danish transport

CO₂ from Danish transport

Key points

- Sustainability means stabilised and eventually decreasing emissions
- Technology may be enough to stabilise but hardly to reduce emissions
- Planning in the widest sense needs to underpin demand management so that we 'do more good with less transport'
- It is not about choosing between options but rather choosing them all
